DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19 allowed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bell (6,373,141) in view of Hikita et al. (6,369,407)

Regarding Claim 20, Bell discloses an integrated circuit having wirebound pads suitable for probing where an integrated circuit device structure has probe pad extensions in electrical communication with the wire bond pads. The disclosure provides an improved probing system for wire bond packages such that neither the wire nor the wire bond from the pads on the chip surface need be removed during the testing procedure. The integrated circuit device includes a plurality of conductive pads having a first area for receiving a wire bond and a second area for receiving a wire bond and a second area for receiving a probe wherein the second area abuts, and is an electrical communication with the first area. Bell does not disclose the pad regions in the required manner. However, Hikita et al. disclose a semiconductor device that has a substrate, an internal circuit formed on the semiconductor substrate, a connection pad formed on the semiconductor substrate and connected to the internal circuit, and a test pad formed on the

Art Unit: 2826

semiconductor substrate as to be connected to the connection pad and used for functional testing of the internal. Test pads may be provided also to accompany external connection pads that are connected to lead frames by wire bonding.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the pad regions in the required configuration in Bell as taught by Hikita et al. in order to have a better electrical connectivity.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
